## GF-TADS AND ASF

### ▶ THE GLOBAL INITIATIVE FOR THE CONTROL OF ASF

## Global control of African swine fever: A GF-TADs initiative

The GF-TADs initiative for the Global control of ASF aims to tackle strategic challenges, promote partnerships, strengthen prevention and preparedness measures, and minimise the adverse impacts of ASF. The GF-TADs platform allows regional alliances to be fostered and provides opportunities for synergies with existing control strategies for other transboundary animal diseases.

The Initiative provides the structure to work towards the global control of ASF. It establishes a theory of change, translated into a logic framework - which describes the outputs and indicators according to the following three objectives:

**Objective 1.** Improve the capability of countries to control (prevent, respond, eradicate) ASF using WOA standards and best practices that are based on the latest science.

**Objective 2.** Establish an effective coordination and cooperation framework for the global control of ASF.

## MARCO LÓGICO

### Control global de la peste porcina africana

Iniciativa GF-TADs

## Seguimiento y evaluación

- Objetivo 1. Mejorar la capacidad de los países en el control (prevención, respuesta y erradicación) de la PPA utilizando las mejores prácticas basadas en los últimos avances científicos.
- Objetivo 2. Establecer un marco efectivo de cooperación y coordinación para el control global de la PPA.
- Objetivo 3. Facilitar la continuidad del mercado.

### African swine fever at a glance

*African swine fever* (ASF) is a contagious disease of domestic and wild pigs. The number of countries and territories affected by ASF has increased in recent years, with notifications from countries across sub-Saharan Africa, Europe and Asia. The ASF situation continues to evolve (access to the latest updates), threatening pig health and welfare worldwide.

Pork accounted for 35.6 percent of global meat production in 2018 (FAO Food Outlook 2019), becoming one of the main sources of animal protein among a growing human population. ASF not only threatens food security worldwide, but also impacts the livelihoods of small- and large-scale pig producers and many other actors involved in the supply chain, other related industries, and have impact on wildlife.

#### The GF-TADs response

In the absence of an effective ASF vaccine or treatment, the response to the disease must involve coordinated actions at different levels. By empowering global and regional alliances, the GF-TADs Global Steering Committee is a pivotal mechanism for coordinating the fight against this transboundary animal disease

# Pilares para la acción. Estrategia Regional para la contención y la prevención de la PPA en las Américas

1. Planificación de la preparación y la respuesta.

2. Mejora de la bioseguridad.

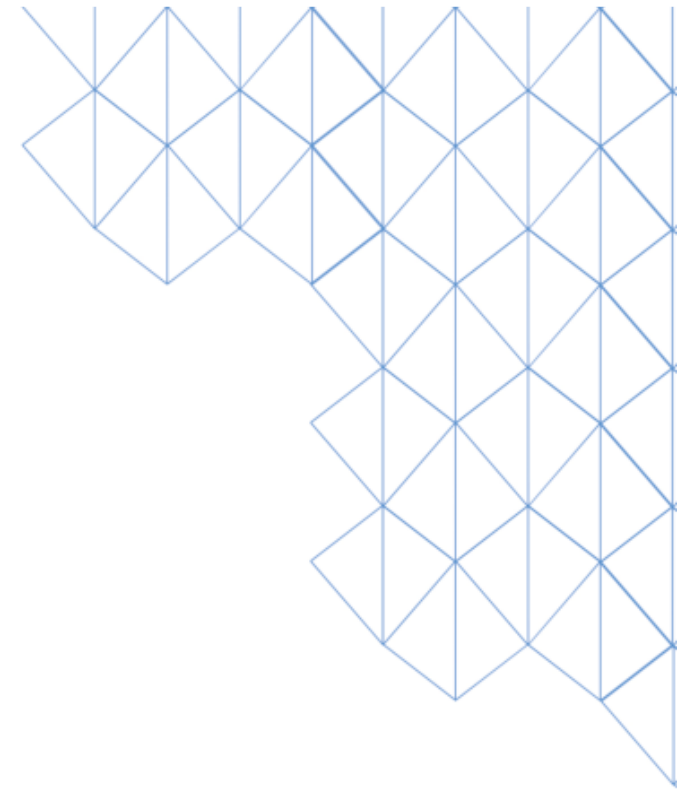

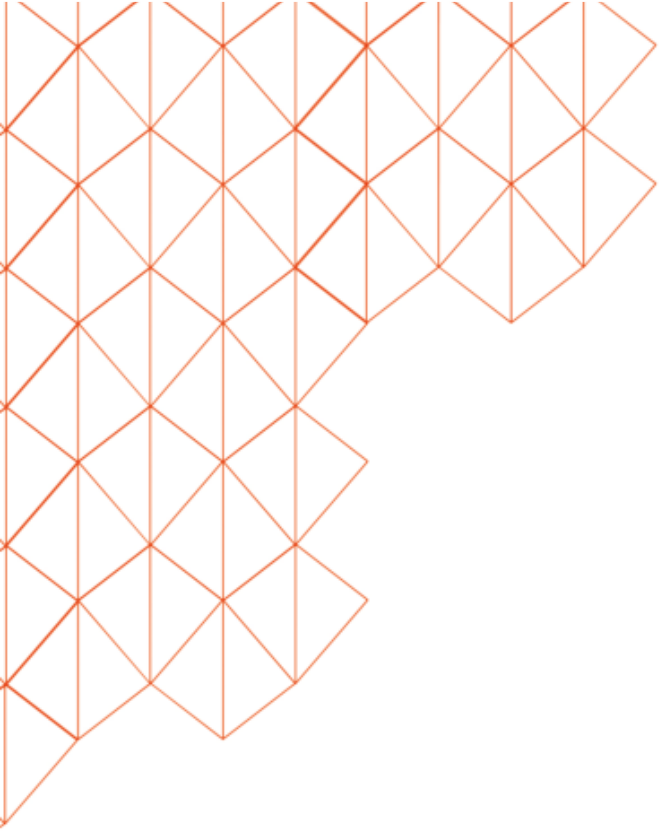

3. Asegurar la continuidad del comercio.

4. Comunicación de riesgos coordinada, compromiso de la comunidad y promoción de políticas.

5. Vigilancia para la detección temprana.
